**Subject:** Re Tree Equity plan

Dear Rugby Council ,

Satellite data published on the “Tree Equity Plan” shows that some parts of Rugby are hotter than average ... and we are all going to get hotter in the years to come. So Question 21 on the Tree plan is “should we plan for more tree canopy cover?” . My answer to this is a definite

Yes.

More trees reduce surface temperatures first by providing shade and secondly by a process called “evapotranspiration”.

Also we need trees to enhance the look of environments, provide shelter for wild life and for all of our mental health and well being .

Kind Regards
